Spending & income by membership

Revenue by payment method

Reading the customer view

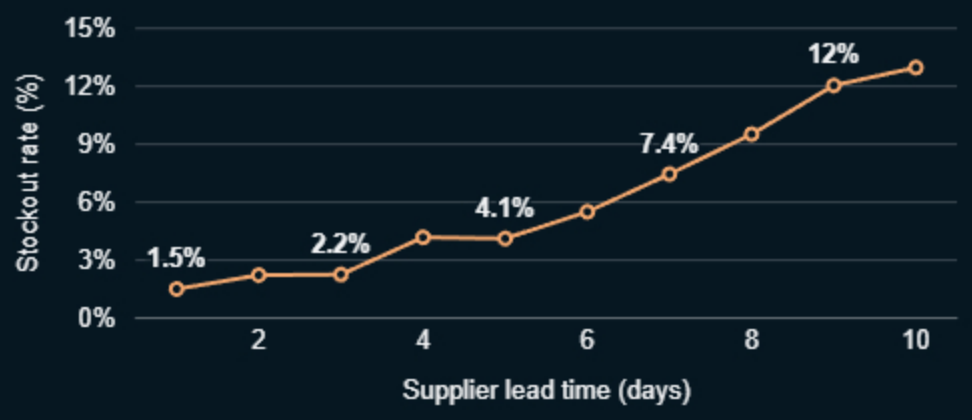

Income is averaged over sales records. A customer can appear in more than one membership tier during 2024.

Payment mix shows share of revenue, not share of customers.

Stockout rate by lead time

Stockout rate | holiday vs normal

Forecast error by weather

Risk signals

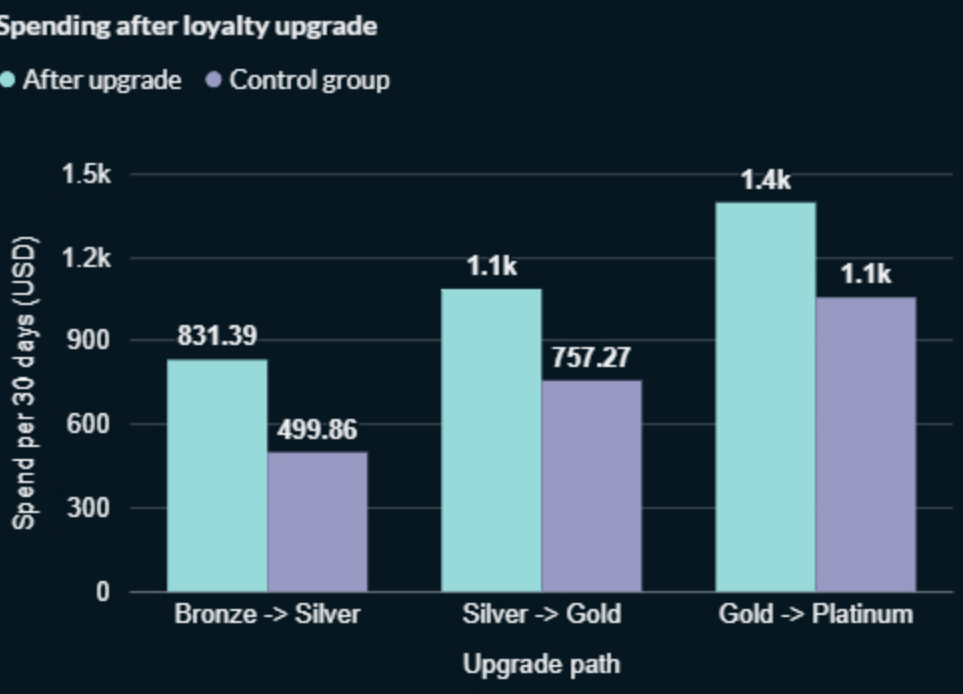

22.5% on holidays vs 3.9% on normal days — stockout rates within each day type.

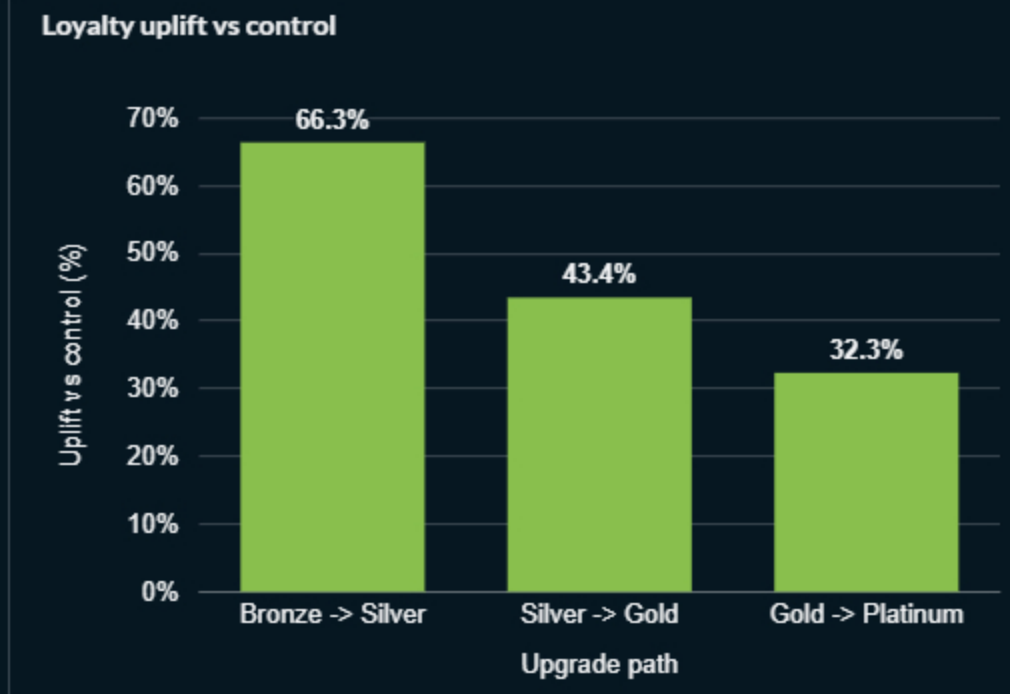

Longer supplier lead times are associated with more stockouts in this dataset.

Forecast error = **actual − forecast**. Negative values indicate over-forecasting. Rates describe sales events, not all SKU-days.

Loyalty in context

Bronze → Silver: +66.3% · Silver → Gold: +43.4% · Gold → Platinum: +32.3%

Spend is normalized per 30 days and compared with a stable-tier control group over the same time window. These are observational comparisons from synthetic data, not causal estimates.
